## THE SOUNDS OF LIFE!

### AN INVITATION TO HEARING BETTER.

Hearing better should be your goal. Why? Hearing loss can affect a person in three main ways: fewer educational and job opportunities due to impaired communication; social withdrawal due to reduced access to services and difficulties communicating with others; emotional problems caused by a drop in self-esteem and confidence. When you consider these factors, the appeal of better hearing becomes even stronger. The goal of better hearing is achievable when you have the right kind of professional help. The six reasons hearing aids are beneficial: • Increased Financial Security: As your ability to communicate effectively with others improves, so will your performance in the workplace; • Better Cognitive Health: Untreated hearing loss has been linked to an increased risk of developing cognitive problems and even dementia. • Reduced Tinnitus Symptoms: Tinnitus is a high pitched ringing or buzzing in the ears and is strongly associated with hearing loss. Having improved hearing will move the unwanted sounds to the background and offer relief from this stressful and annoying condition; • Better Quality of Life: People who wear hearing aids to correct their hearing loss enjoy a better quality of life than those who let hearing loss go untreated. Hearing aids help people to comfortably and safely engage with the world around them, improving life quality substantially. • Staying Active: A professionally fitted hearing aid can make it possible to go right on doing the things you love with the people you love i.e. outdoors or social events. • Hearing Aid Wearers are Happy People: From the positive changes they see in their relationships, to how they feel about themselves, their social interactions and their work lives, hearing aid users are greatly benefitting from today's technology which makes them more content and happy in their everyday lives.

### OUR GUIDE TO BETTER HEARING FOR YOU

1. Make an appointment - Phone now for a free consultation. A hearing test will be done in a sound-proof booth.
2. Choose a hearing aid - A hearing aid will not restore your normal hearing but with regularly wear will help you adjust to sounds and their sources. There are different types of hearing aids so there is one specifically suited for each individual's needs. The type of hearing aid needed will be determined from your test result (Audiogram) and also discussing family history of hearing loss and which sound environments are most difficult for you.

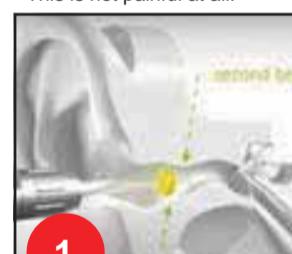

### TYPES OF PHONAK HEARING AIDS

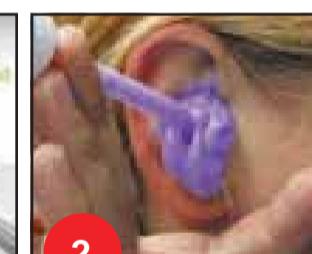

Phonak has the right hearing aid for you - regardless of your type of hearing loss, lifestyle, personal preferences, your age or your budget. We decided to develop outstanding hearing solutions for everyone. There are various models which are all available in a number of colours to suit your hair colour or if you prefer you can go for extravagant colours.

### 3. Making the mould(s) of your ear(s)

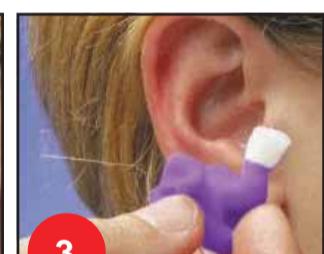

This is not painful at all.

1 An otoblock is inserted into the ear

2 The impression material is injected into the ear with a syringe

3 It is left in the ear for 7-10 minutes to cure and is then carefully removed and sent to the lab for the mould to be made.

4. Coming for the fitting of your hearing aid(s) - After approximately 3-5 days the hearing aid(s) will have been received from the supplier and we will contact you for an appointment to come for the fitting. You will be shown how to insert and remove your hearing aid(s) and how to replace the batteries and take care of your hearing aid(s). Your hearing aid(s) will be programmed through computer software.

5. Follow up visits - Getting used to all the new sounds takes time and patience therefore it is required that you wear the hearing aid(s) for a few days and then make an appointment for the setting to be adjusted if required. You can also bring your hearing aid(s) for free cleaning and tube replacements at any time.

### HEARING AIDS FOR CHILDREN

Young listeners need access to millions of words and thousands of hours of listening to develop spoken language and literacy. With our comprehensive portfolio we support children with hearing loss to unlock their full potential. The Phonak Sky range for children comes in various models and exciting colours. You can be rest assured that your child is getting outstanding performance with the Sky hearing aid(s) wherever and whenever needed and because they are water, sweat or dust resistant, nothing will get in the way of your child's fun and learning.
